Cell types and diseases by organ: 191 diseases × 700 cell types

Atlas: hpa700. Rows and columns clustered (average linkage, correlation distance). Disease-specific z removes each cell type's baseline across all 268 diseases.

Silhouette of the groupings (higher = tighter; shuffled labels in brackets): cell lineage 0.07 (-0.14), tissue -0.12 (-0.21); disease organ system -0.02 (-0.13).
